

AUTOMATIC MINIATURE FIRE EXTINGUISHER

WITH PIPE CONNECTION

Following our vision

„A world where everyone is protected against the dangers of fire, everywhere and anytime“, we have further improved our automatic miniature fire extinguisher AMFE.

Additionally to the standard connection of our AMFE to a CO₂ or N₂ cylinders, we now offer the AMFE series with connectivity to attach a piping system to the AMFE, for using external, potentially larger, extinguishing agent containers.

This allows our customers to use the AMFE effectively to protect even larger devices with greater volume than before, while not compromising the available space inside a cabinet, device or appliance.

Yet, the proven functionality of JOB's AMFE remains the same: the glass bulb (like being used in sprinklers) bursts when the set temperature is reached. A spring operated mechanism is activated and opens the sealed gas pipe; the agent is released and the fire extinguished.
